Document Version: [Change Management Report](#)

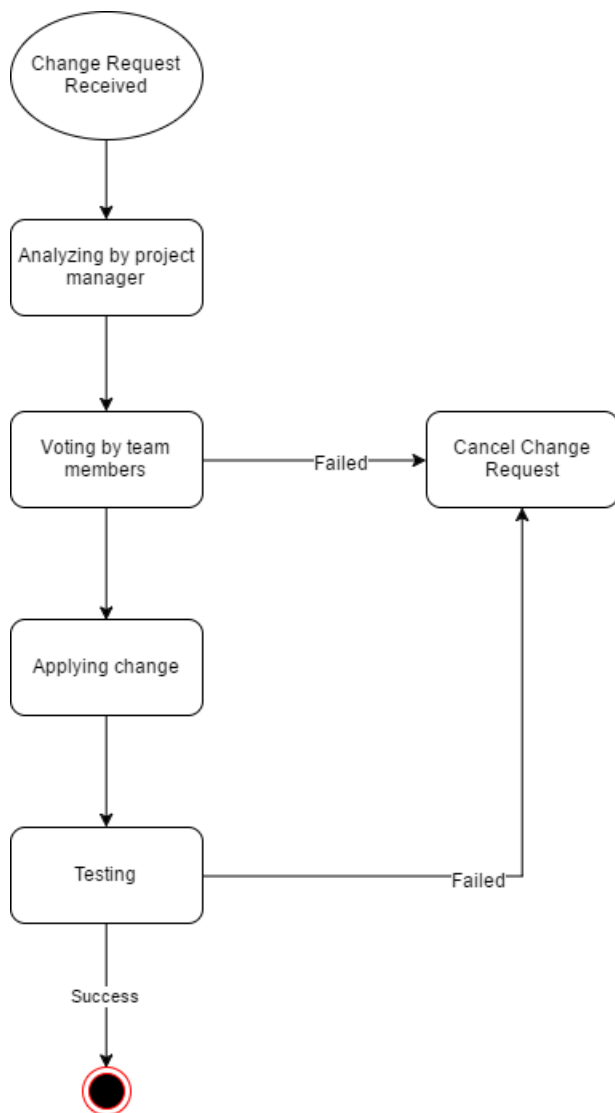

1. Introduction

In this document, our purpose is to explain clearly any change request that how it is should be done. The changes which encountered until now are detailed with flow chart and

We have determined how we evaluate the changes we have encountered up to now with a flow chart and explanations.

2. Change Request Format and Consideration of Change

There is our diagram that shows us a way that which way we need to following when we encountered with a change.

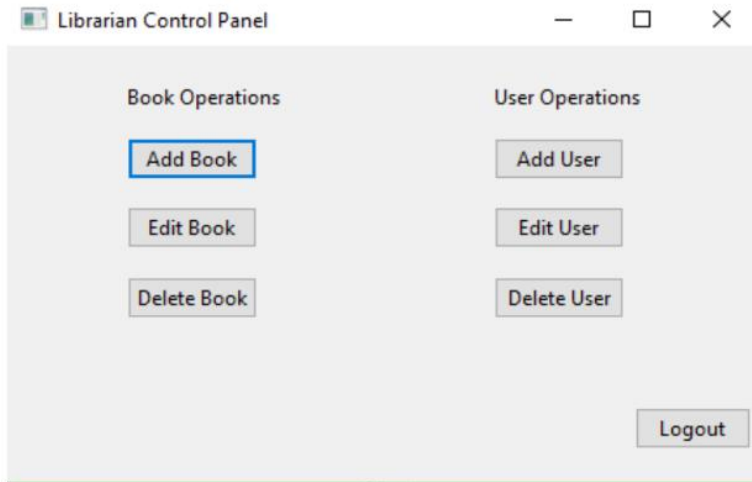

We can see that what do we need to do when one of project members want to do any change that encountered by looking at the figure on the side.

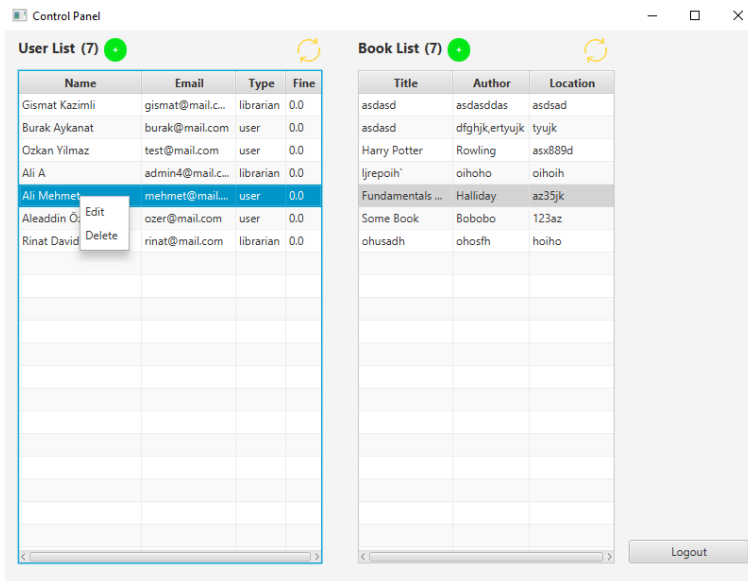

Figure 1: Consideration of Change

3. Changes Made

Our most important change that we need to do was Graphical User Interface which is created using SWT builder in Java. SWT builder has a very limited usage for us because there is too little and old information about it and its usage. So I think a lot about this we decided to change our GUI as Java FX which is better and more usable than SWT. Here is followed two picture of librarian screen which are created SWT and FX.

Picture 1: Librarian Screen that is created using SWT

Picture 2: Librarian Screen that is created using FX
